

Your Prescription for Crystal Clear Water™

Rx Clear Chemical Maintenance Pool Kit - Large

Follow these step-by-step instructions to maintain a crystal clear pool.

1. To Maintain proper water balance, it is beneficial to get in the habit of testing your pool water on a weekly basis. This kit includes 50 test strips to get through the entire swim season.
2. Test and adjust the alkalinity level. Alkalinity Up is not included in this kit but is a chemical that is ideal to have on hand to adjust your pool's alkalinity levels as needed. The alkalinity must stay in range for your chlorine to work at its full potential. The alkalinity level may drop when it rains, depending where you live. If it does, raise the alkalinity level to the 80-120 ppm range.
3. Test and adjust the pH to the 7.2-7.6 range. Rx Clear® Swimming Pool pH plus Increaser is not included in this kit but is a chemical that is ideal to have on hand to adjust your pool's pH level as needed. Chlorine tablets can affect your pH so to get it back in balance, add an estimated 1lb. of pH plus for every 6 chlorine tablets used.
4. Test your pool's Cyanuric Acid level, which should be around 30 ppm - 50 ppm. This chemical is used to prolong the life of your chlorine (also known as sunscreen for your chlorine). To raise to the level needed, use Rx Clear® Conditioner/Stabilizer. This should be raised once at the beginning of the season.
5. Add 2 bags of Rx Clear® Super Shock 68% weekly, at night, per every 30,000 gallons. Shocking the pool destroys bacteria which then leaves the free available chlorine to do its job. This will help maintain 100% free chlorine residual.
6. The morning after the shock treatment is the ideal time to add Rx Clear® Swimming Pool Algaecide 50 plus. Add 3 oz. per 10,000 gallons weekly.
7. Add 4 jumbo chlorine tablets weekly, in either a floating dispenser or automatic chlorinator. The addition of the chlorine tablets will help eliminate bacteria.
8. Your kit also includes Rx Clear® Super Clarifier. Use 4 oz. of Clarifier for up to 15,000 - 30,000 gallons any time you're not satisfied with the clarity of the water.
9. If you have any questions about this kit, call 1-800-356-3025 for further assistance.
